

Installation CarF

Content

1.)	General	3
2.)	CarF installation.....	4
3.)	Mixed operation CarF - Tricad-MS.....	18
4.)	Error messages - possible solutions	19

1.) General

CarF is an application for MicroStation, i.e. that MicroStation must always be installed before CarF.

The following applications will be installed with CarF:

- Conveyour- layout
- Tractory curves
- Steel platforms
- Paintshop
- Facility layout
- Chipping conveyour
- Quality check
- Toolkit
- Infrastructure

Supported MicroStation Versions:

- MicroStation Connect (Update 10) with Windows 10, Version 1809
- MicroStation V8i (SELECTseries 4) with Windows 7 / 8.1 and Windows 10
- MicroStation V8i (SELECTseries 10) with Windows 10

Supported Excel Versions:

- Office 2013, 2016 and 2019

Download Software:

<https://carf.luartxit.de/download.php>

(Login required)

Support:

LuArtX IT GmbH

Softwarezentrum Böblingen/Sindelfingen e.V.

Otto-Lilienthal-Straße 36

71034 Böblingen

Telefon: 07031 - 3047489

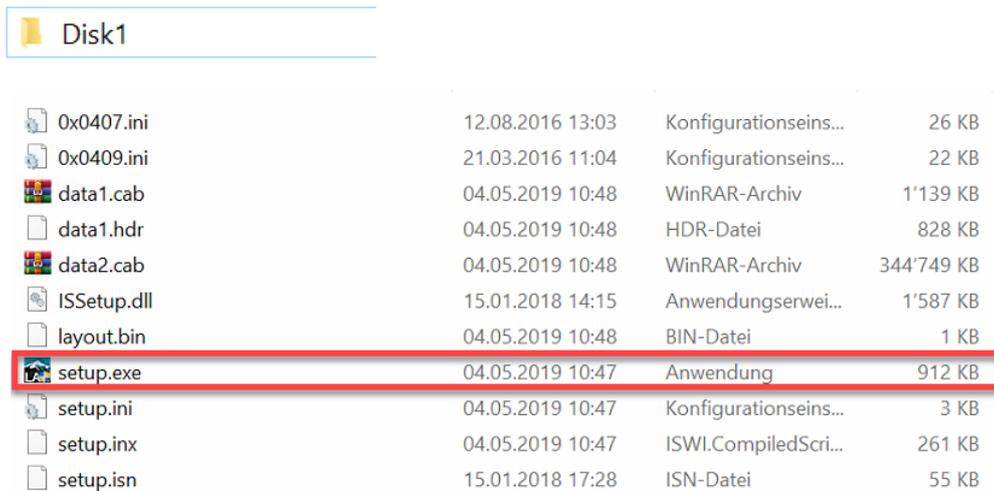

E-Mail: support@luartxit.de

Homepage: www.luartxit.de

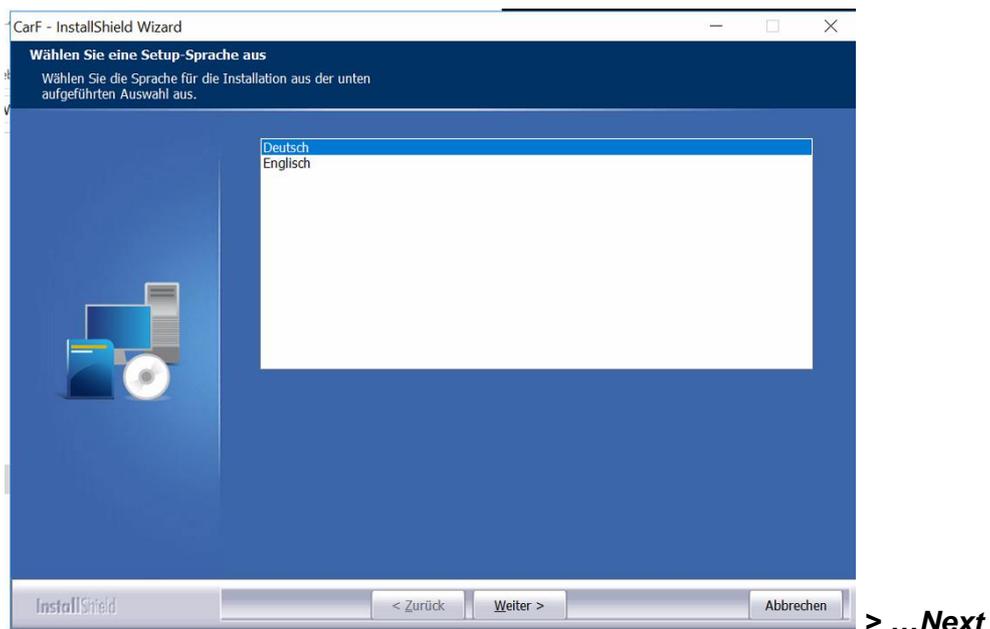

2.) CarF installation

MicroStation must not be open when installing.

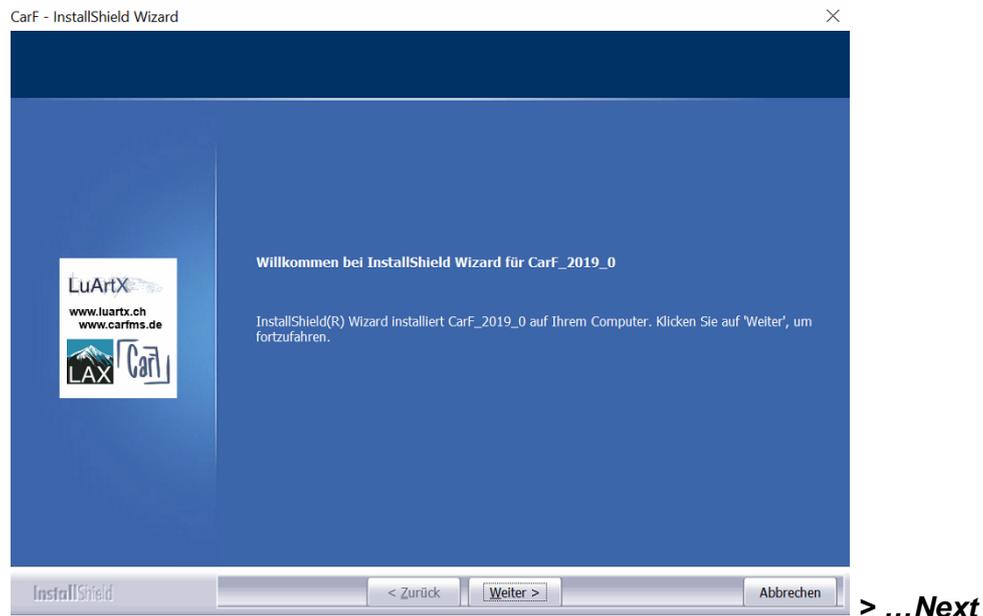

1.) Run setup.exe in the "Disk1" folder

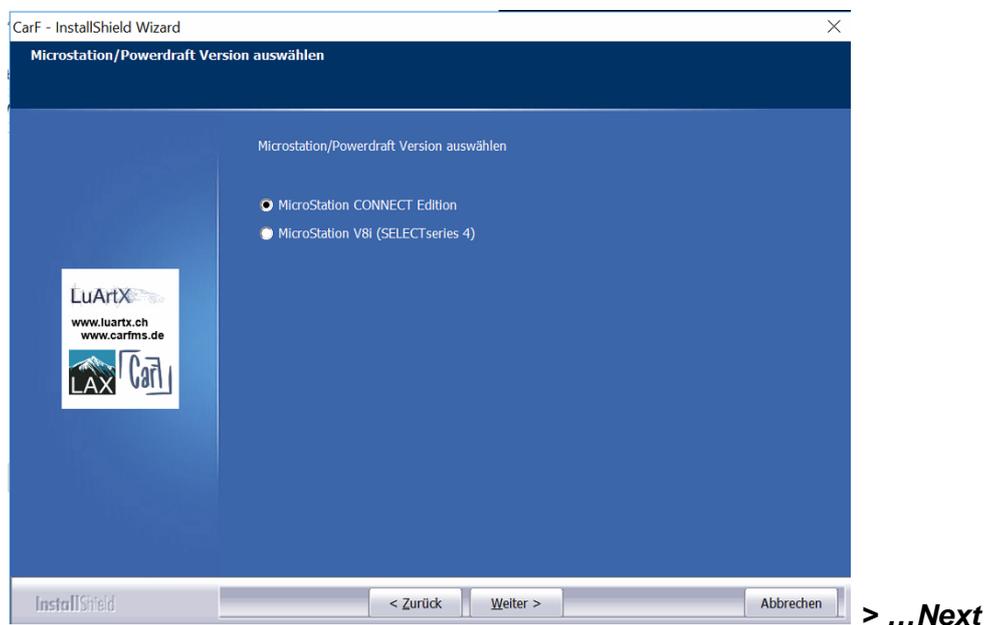

1.) Select language

2.) The version of the CarF installation is displayed

3.) Select MicroStation version

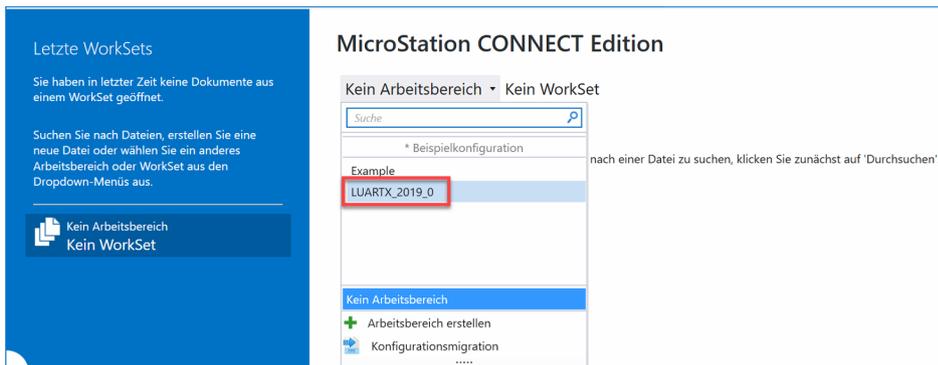

For the selected MicroStation version will either

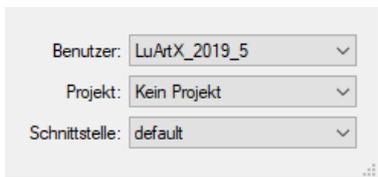

- a LuArtX* Workspace (Connect) or
- a LuArtX*.ucf file created (V8i).

These settings can be selected later when MicroStation is started:

MicroStation Connect:

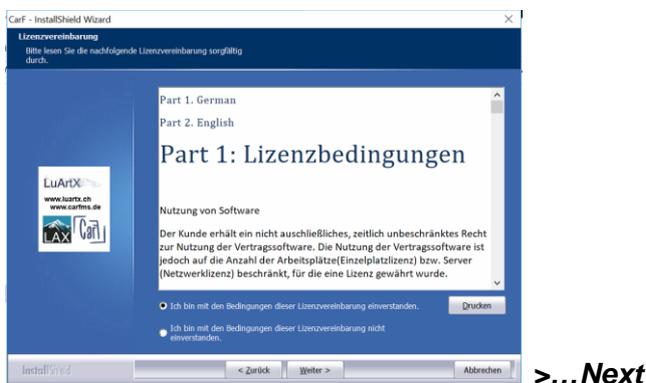

MicroStation V8i:

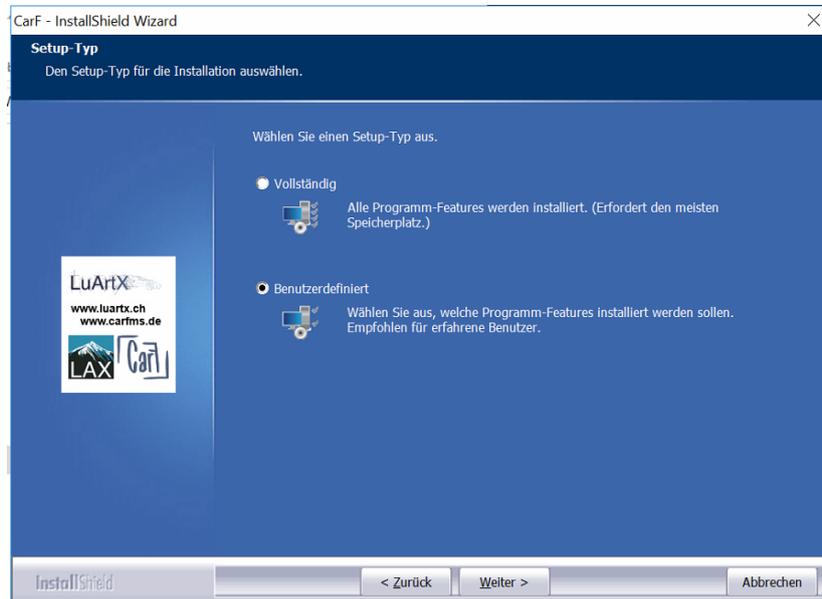

MicroStation configuration variables for operating the Carf software are set in these settings files.

4.) Agree to license terms

5.) Full installation / custom installation.

Full:

- CONNECT Version CarF
- V8i Version CarF
- ...will be installed.

➤ Without CarF Infrastructure-settings (env)

Costum:

- the possibility to install the V8i or the Connect CarF version
- the possibility to select the settings files (env) for the CarF **infrastructure module**

➤ *Is absolutely necessary when using the CarF infrastructure module without mixed operation with Tricad-MS*

6.) Installation folder

Note mixed operation CarF + Tricad- MS:

When using Tricad-MS modules at the same time, the CarF software can be installed in the Tricad-MS installation directory

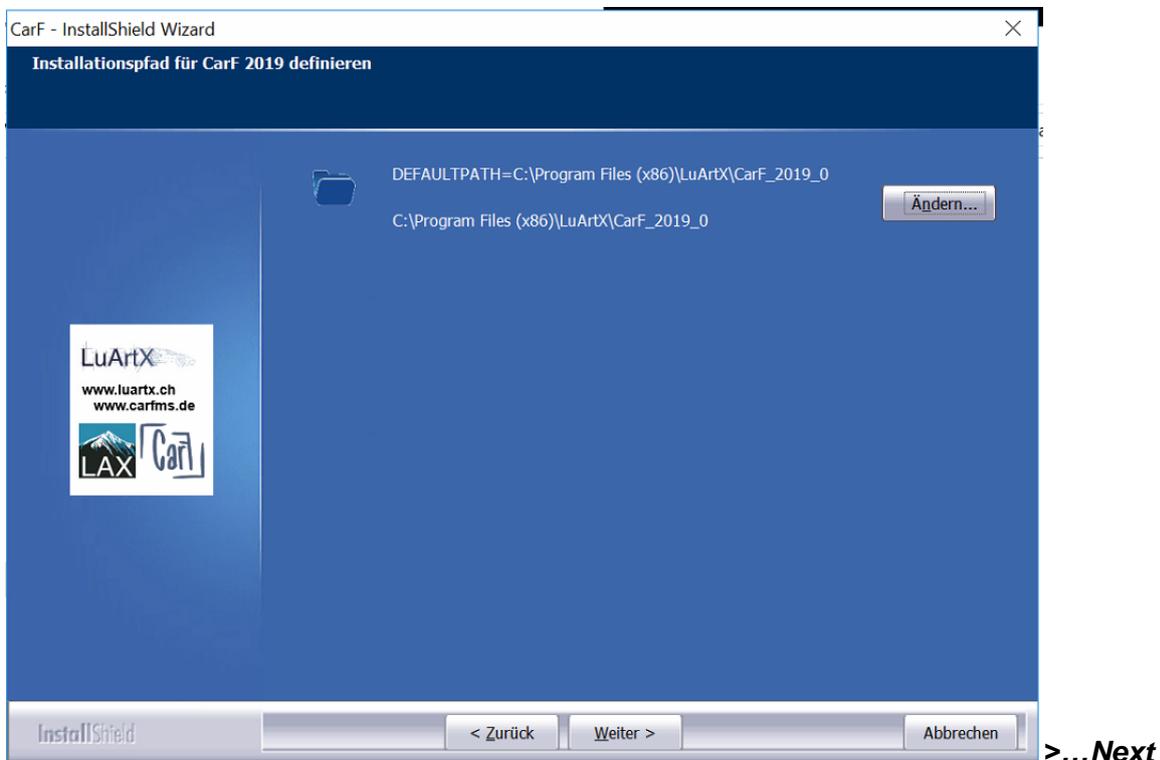

If possible, combine the latest Tricad-MS installation and the latest CarF version

Sequence installation mixed operation:

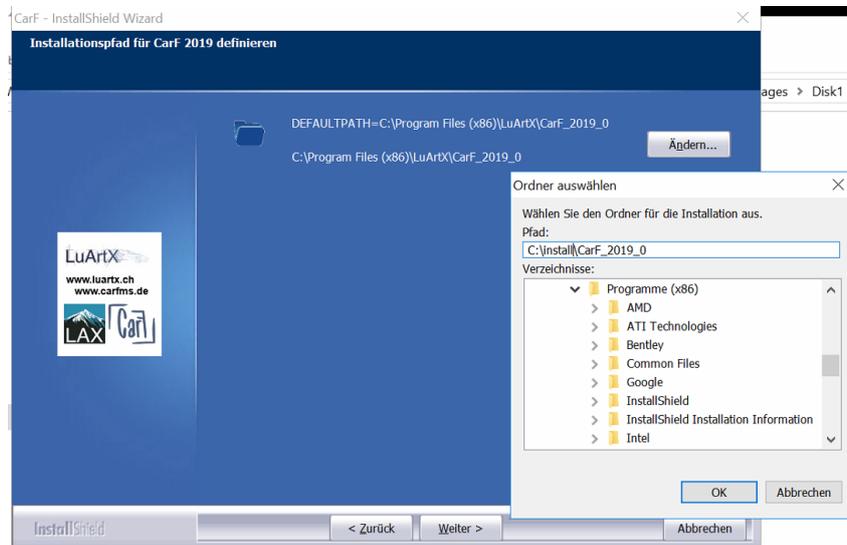

- Tricad- MS
- Tricad- MS Help
- Tricad- MS latest Patch
- CarF Software

Default path:

«C:\Program Files (x86)\LuArtX\CarF_2019_*»

Any installation path can be selected via «Change».

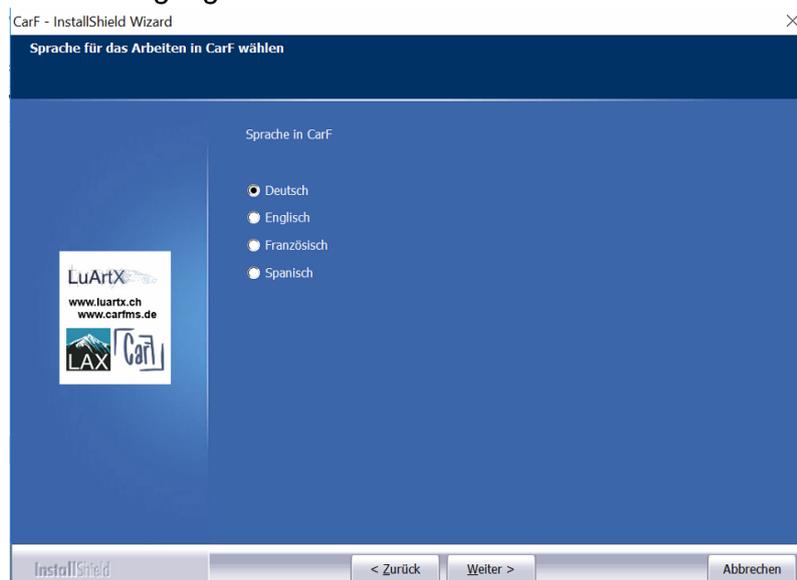

For Example:

«C:/CAD/ LuartX/CarF_2019_*»

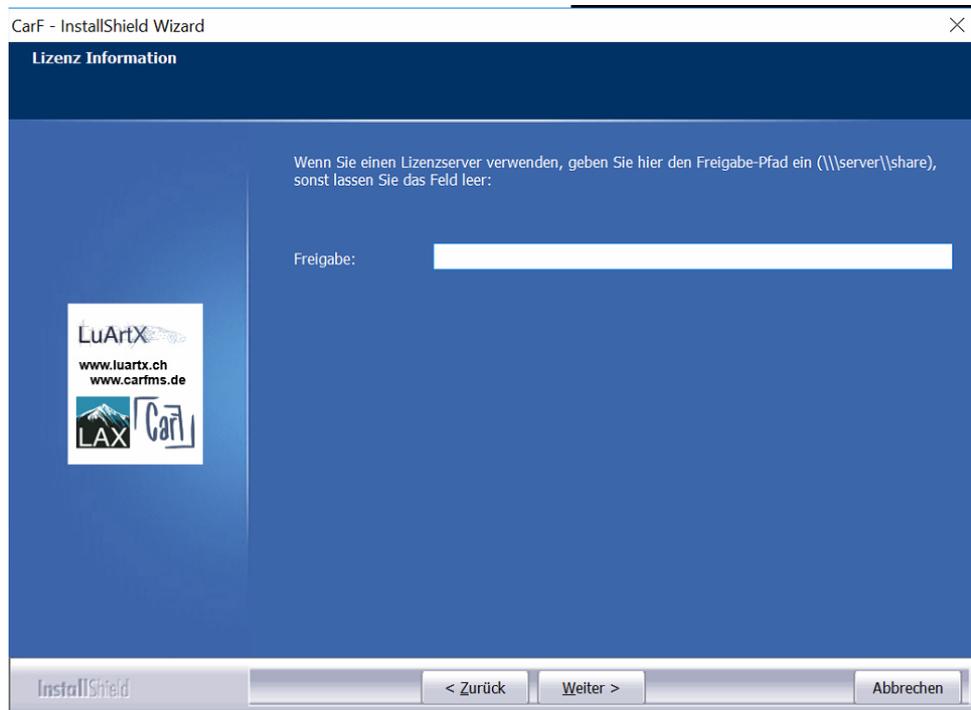

7.) Language selection interface CarF

- *This setting sets the MicroStation environment variable LUARTX_LANG to the desired language.*

>...Next

8.) Shared Folder (only License -manager)

Single site license

- *nothing to do* -

Network licensing (special license file required):

License server not yet installed: - *nothing to do* -

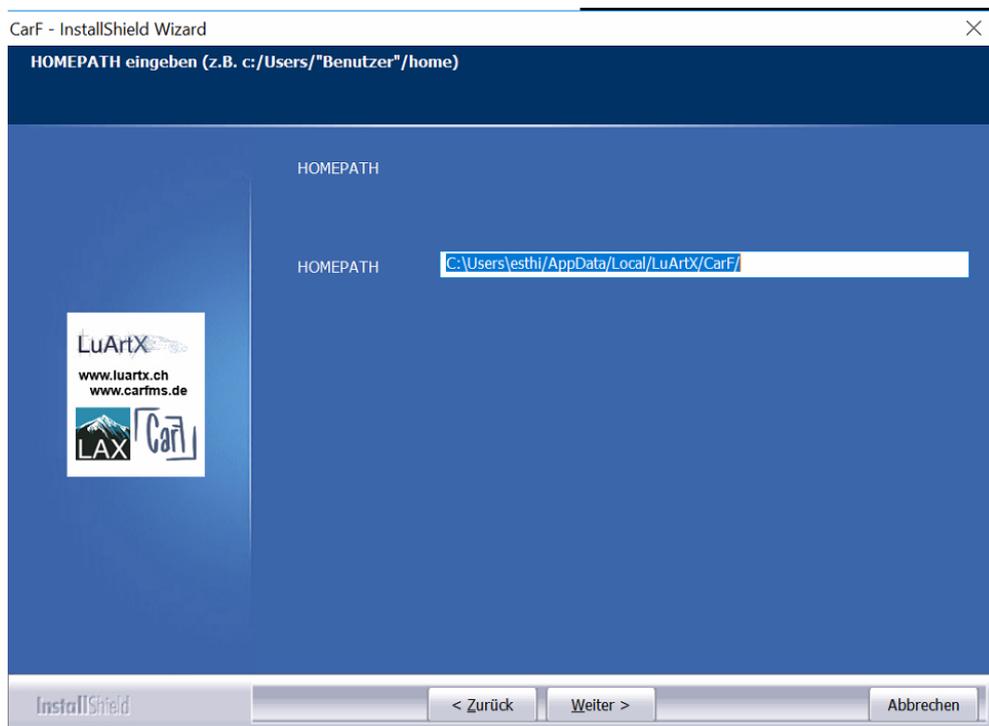

License server installed: - *enter Path + Shared Folder* -

For example: `//SERVER/licman_lx$`

- *This entry sets the MicroStation environment variable «LUARTX_LIC =».*
- *This variable can also be set afterwards.*
- *Installation of the license manager is described in detail in a separate document.*

9.) Select home directory

- The "HOME path" is set to by default:
„USERPROFILE“Appdata/Local/LuArtX/CarF“
- This entry sets the MicroStation environment variables «HOME» and «LUARTX_HOME»
- The HOME path can be changed as required.
For example: \$(LUARTX)/home
- Users need read and write access to the home path

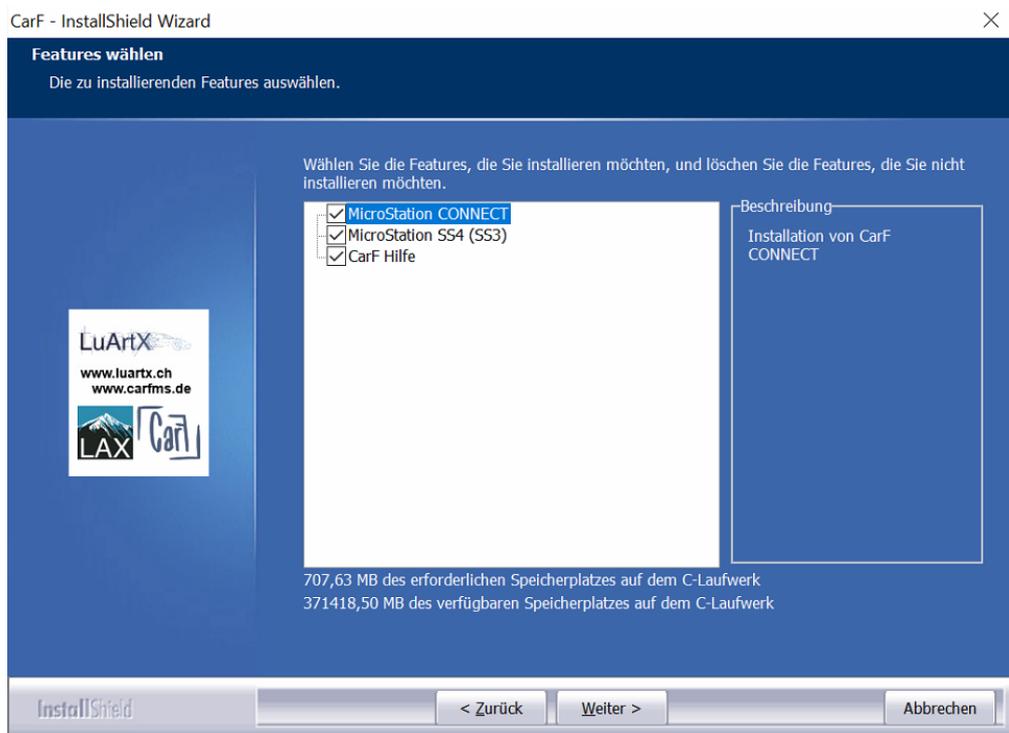

Important:

Is e.g. installed an administrator account, the variable must be changed, otherwise the home path is only set for the admin user. That leads to error messages when the program starts

>...Next

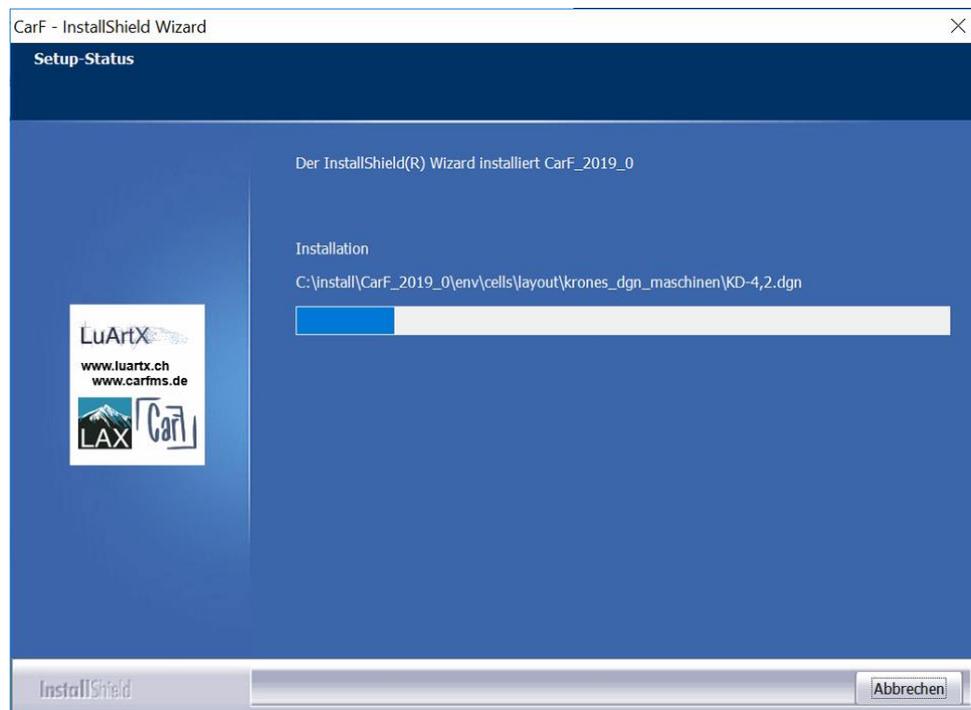

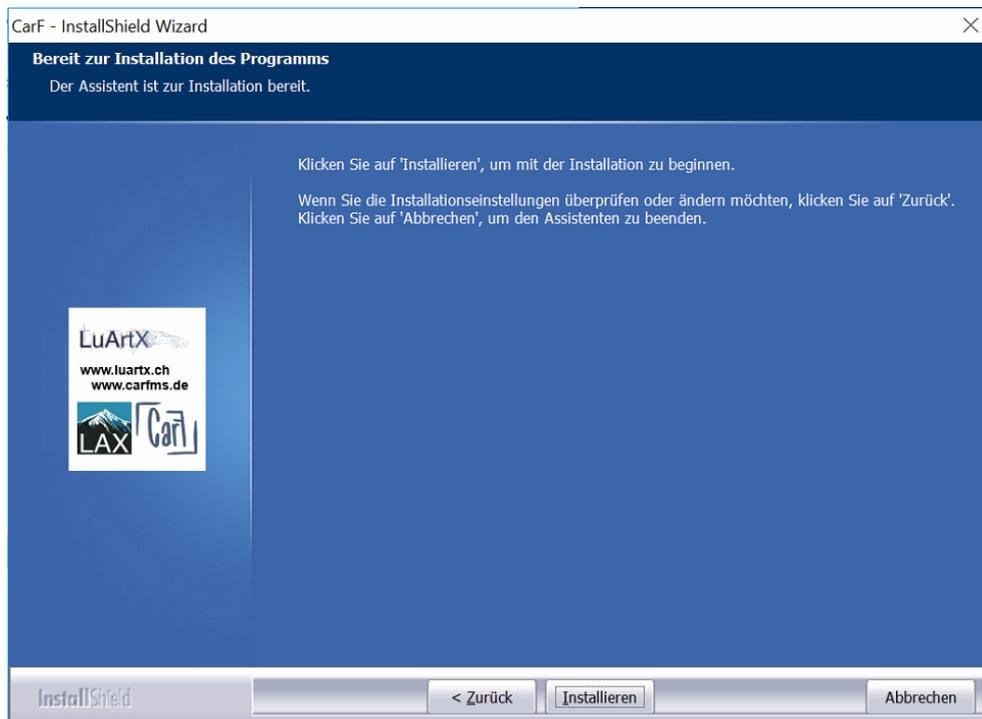

10.) User-defined installation: selection of program versions

If "User-defined installation" has been selected, the selection of the products to be installed follows.

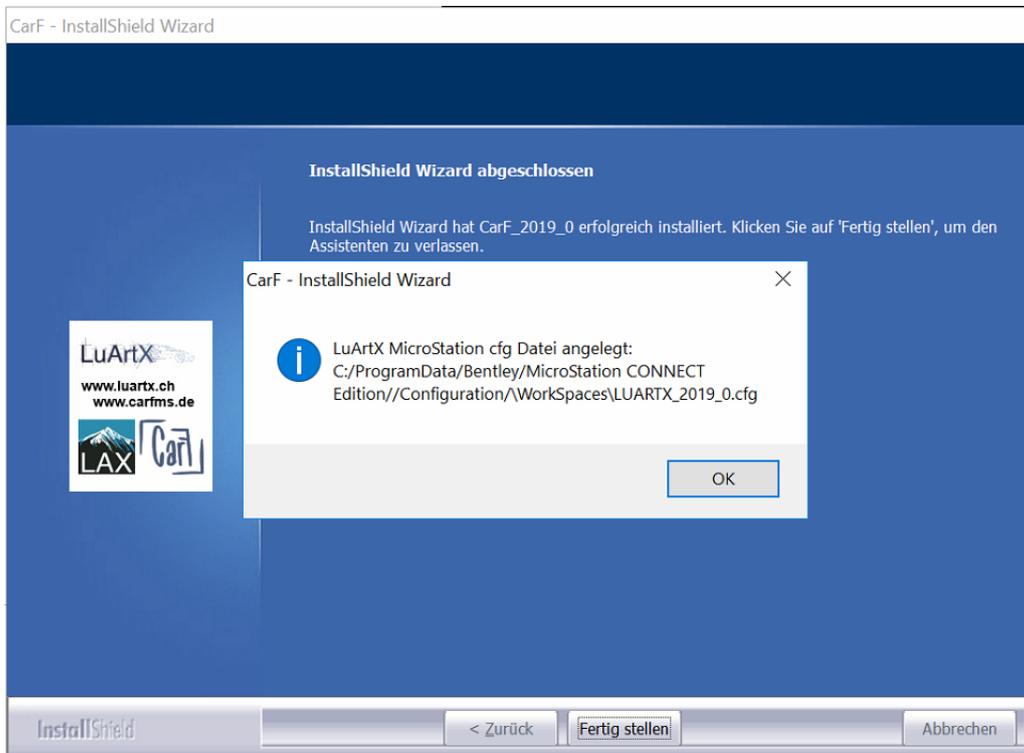

>...Next

11.) Install

12.) Configuration files created in MicroStation

At the end of the installation, the path of the configuration files are displayed.

MicroStation Connect Workspace: LUARTX_2019_*.cfg

For example:

Windows (C:) > ProgramData > Bentley > MicroStation CONNECT Edition > Configuration > WorkSpaces

Name	Änderungsdatum	Typ	Größe
Example	28.04.2019 19:14	Dateiordner	
LUARTX_2019_0	28.04.2019 19:26	Dateiordner	
NoWorkSpace	28.04.2019 19:13	Dateiordner	
Template	28.04.2019 19:13	Dateiordner	
Example.cfg	29.06.2018 16:02	Bentley MicroStati...	2 KB
LUARTX_2019_0.cfg	04.05.2019 12:01	Bentley MicroStati...	1 KB

```

Schnittstelle: default

13.) Licensing

There are 2 types of CarF licensing.

Single site license

The license file (*.lic) received must be copied to the installation directory and renamed to Luartx_18.lic.

Networklicense

A special network license is required for this.

- *The installation of the license manager is described in a separate document*

3.) Mixed operation CarF - Tricad-MS

If the software has been installed in the same directory as Tricad –MS, please note the following:

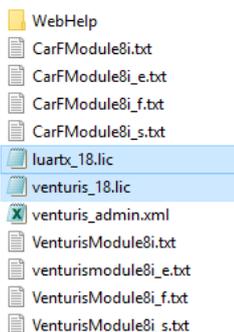

➤ *Order of installation:*

1. *Tricad-MS Software*
2. *Tricad-MS Help*
3. *Tricad-MS Patch*
4. *CarF*

➤ *Only VENTURIS variables are to be used (no LUARTX ...)
(Use Venturis configuration files)*

➤ Single site license:

Both license files for CarF + Tricad-MS are in the installation directory

➤ Networklicense:

*The Venturis license manager from 3.13 must be installed.
The LuArtX license manager is not required.*

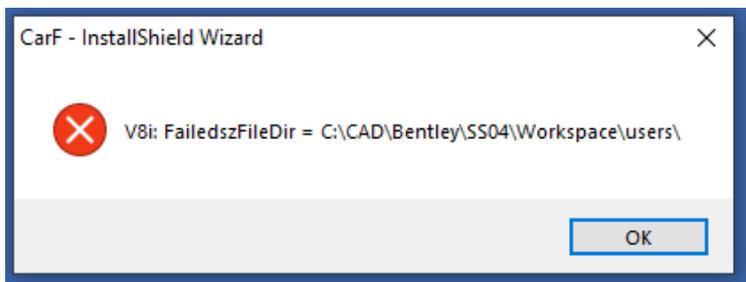

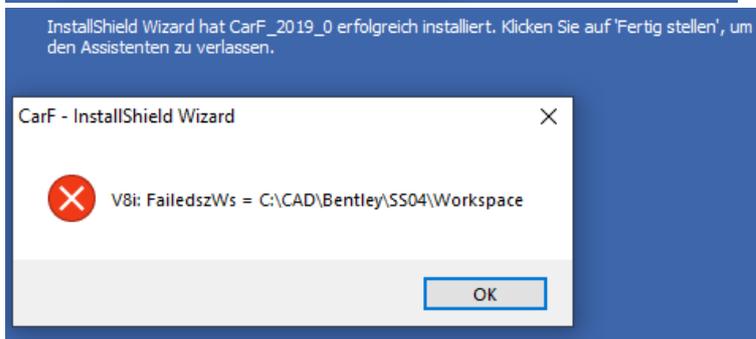

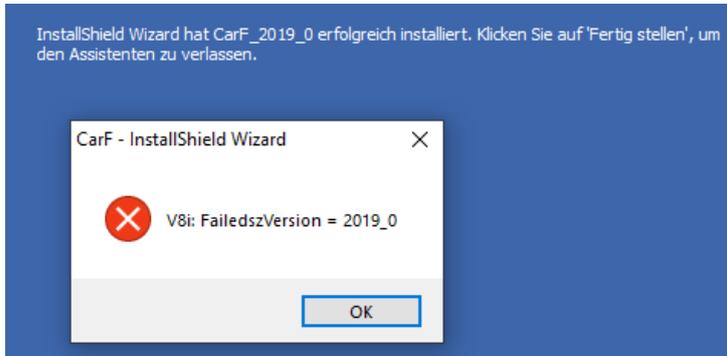

Only the variable VENTURIS_LIC = is required, no LUARTX_LIC variable

Both network license files (Venturis + LuArtX) are managed by license manager 3.13..

4.) Error messages - possible solutions

- Error messages at installation setup:

- The workspace (v8i) / configuration (Connect) was not found. The * .ucf or the workspace (Connect) was not created. Die Software ist trotzdem installiert
- The configuration files for MicroStation are missing
- The variables in MicroStation must be added

MicroStation CONNECT:

Create Connect Workspace for LuArtX, then set variables in the workspace: Auf der ersten Zeile des Workspace ist die Variable LUARTX definiert.

- The variable LUARTX points to the installation path.
- no backslashes in the path, only slash

```
LUARTX_2019_0.cfg - Editor
Datei Bearbeiten Format Ansicht Hilfe
LUARTX = Hier Bitte Installationspfad eintragen: z.B. C:/install_carf/CarF_2019_0/
LUARTX_HOME = $(LUARTX)/home/
HOME = $(LUARTX)/home/
MS_ICONLIBRARYLIST > $(LUARTX)/bin_connect/TRICADMS_*.dll
MS_MDLAPPS > $(LUARTX)/bin_connect/
MS_MDL > $(LUARTX)/bin_connect/
MS_DGNAPPS > $(LUARTX)/bin_connect/CarFMenu_cn.ma
LUARTX_NOMASK = 1
MS_HELPPATH > $(LUARTX)/help/

MS_ADDINPATH > $(LUARTX)/addin_connect/
CAD_LICTYPE = LUARTX
LUARTX_RIBBON_LANG = german
#ifdef LUARTX_LANG
%if $(LUARTX_LANG)== "e"
LUARTX_RIBBON_LANG = english
%elif $(LUARTX_LANG)== "s"
LUARTX_RIBBON_LANG = spain
%elif $(LUARTX_LANG)== "f"
LUARTX_RIBBON_LANG = french
#endif
#endif
MS_GUIDGNLIBLIST > $(LUARTX)/DGNLIBS_RIBBON/$(LUARTX_RIBBON_LANG)/*.dgnlib
MS_RIBBONXML > $(LUARTX)/DGNLIBS_RIBBON/$(LUARTX_RIBBON_LANG)/*.xml
```

MicroStation V8i:

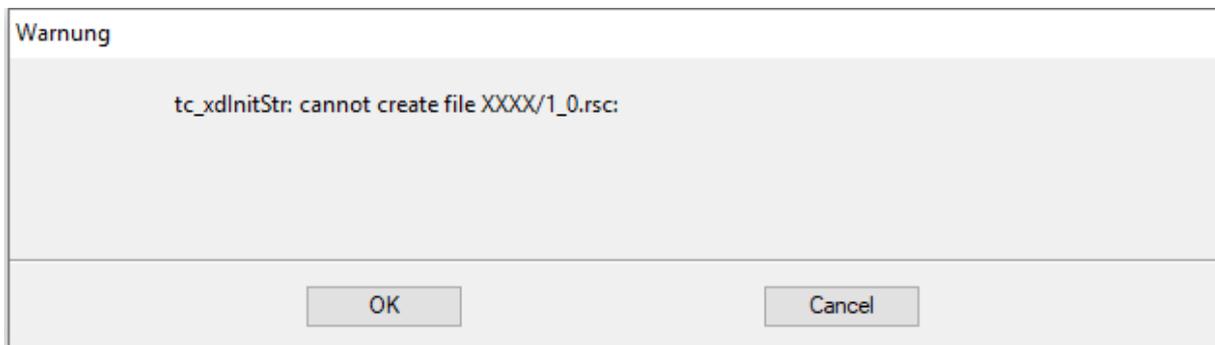

Create LuArtX_*.ucf in the existing v8i workspace.

Then set variables in *.ucf file:

- The LUARTX variable is defined on the first line of the workspace
- The variable LUARTX points to the installation path
- no backslashes in the path, only slash

```
LuArtX_2019_0.ucf - Editor
Datei Bearbeiten Format Ansicht Hilfe
LUARTX          = Hier bitte Installationspfad eintragen|
LUARTX_NOMASK   = 1
MS_HELPPATH     < $(LUARTX)/help/

MS_ICONRSCLIST  > $(LUARTX)/bin_V8i/*.rsc
MS_MDLAPPS     > $(LUARTX)/bin_V8i/
MS_DGNAPPS     = CarFMenu8i
MS_LIBRARY_PATH > $(LUARTX)/bin_V8i/
MS_ADDINPATH    > $(LUARTX)/addin_v8i/
<
```

- Error message after program start

Solution:

Change HOME variables to a desired path. For example:

```
LuArtX_2019_5.ucf - Editor
Datei Bearbeiten Format Ansicht Hilfe
LUARTX = C:/CAD/CARF/2019_5/
LUARTX_NOMASK = 1
MS_HELPPATH < $(LUARTX)/help/
HOME = $(LUARTX)/Home
LUARTX_HOME = $(LUARTX)/Home
```

Or:

Check permissions on directory - read and write permissions on the defined path are required.
